Find a Recipe- Project Statement

Find a recipe is an app that utilizes Edamam Recipe Search API in order to simplify finding recipes for both baking and cooking. By specifying a recipe name and/or other details about the recipe such as diet or meal type, recipes will be found that satisfy the criteria given. These recipes will yield the name of the recipe as well as a preview image and the url to the recipe. Finally, user authentication will be implemented to allow users to save recipes to view later, as well as view recipes that are most saved by all users. This will drastically improve quality of life for people that want to find recipes for baking and cooking by greatly reducing the time needed to find a recipe that fits an individual criteria as well as giving an ability to save recipes all in one location.
